Specialized Course for the ASEAN Region:

Spine Concept Sobernheim - Adolescent Idiopathic Scoliosis Treatment

This specialized course on spinal orthotics for Adolescent Idiopathic Scoliosis Treatment based on Sobernheim functional brace classification is addressed towards practicing P&O professionals who are interested in this advanced spinal bracing system. The course consists of three parts:

1. Five weeks of online theoretical part with an evaluation
2. at the end of this part
3. Five days of on-site practical training
4. Three month of online follow up and support
5. Clinical Case Presentation

For the online trainings, the participants will be enrolled on the Human Study internet platform/virtual classroom to receive the specific theoretical content.

The Five-day on-site training, working hands-on with real cases of AIS is conducted at the premises of SSPO – Mahidol University , Thailand.

The online follow up period includes online support for cases that are handled by the participants over three month after the completion of the practical training. It includes up to three case presentations to be conducted by each participant with attendance of other participants and the trainer team in the virtual classroom, however the submission of at least one Case Presentation per candidate is mandatory in order to receive the Human Study Certificate for this course.

This course is aimed for practicing P&O professionals who want to improve their skills by learning the Cheneau-based Sobernheim Functional Bracing method for scoliosis treatment.

Candidates requirements:

- At least 2 years experience in scoliosis treatment
- Good English proficiency: must be able to read, write and comprehend English
